PHOTOMONTAGE

REFLECTION ON PROJECT 3

Project 3 acted as an introduction to many things. It introduced different photoshop tools and techniques in order to create both the contact sheet and the photomontage. I didn't know what a photomontage was until this project nor the basics of editing photos. I would say I have a foundational understanding of these skills, which I hope to improve in the future. In this project I further expanded my abilities in Rhino. Everyday that I use Rhino it becomes more enjoyable and intuitive overall.

The woodshop at first was extremely daunting given the stakes. More specifically, the stakes were losing a finger if you mess up. The fruits of labor paid off in the end by learning the basics of the chop saw, mitre saw, and band saw. While we learned how to use all of the tools in training, I had never been able to use these tools for an individual project. I hope this has a lasting impact on me in the future. Whether that be creating my own bookshelves or furniture remains to be seen. I also learned about the concept of a cut sheet that I was able to create on Rhino. While this was not required, it helped immensely in the process of making cuts and visualizing what I needed to do in order to create the final project base.

REFLECTION ON ARCH131

ARCH131 taught me many things. It most definitely changed my life. It's not just the vocabulary words that I learned or the concepts, but rather the physical manifestations of the time that I have put in. I have proof that I was here, that I am attending Cal Poly as an architecture major. There was an excitement to each week out of curiosity of what was to come. I wouldn't have wanted it to be any other way. With the physical or digital proof of my work, I also have the skills and knowledge that came with it. Woodworking, diagramming, and modeling are ones that come to mind, which were all used in the third project of the quarter. Everything was connected in one way or another. I now see the world just that differently because of this class. I don't think of ARCH131 as a class, but rather it was just school at the time. It's just what I did everyday without question. I'm sure that everything that I do from now on will build on the skills and concepts learned in this class.
