Bio

is 18.97 years old
is thankful to be here
has origins in the western, central, and
eastern parts of the world
but from that one desert east of LA
near joshua’s trees

wears all accessories on the left side
learned Spanish after the age of 16
too curious about the world
doesn’t mind the heat or cold

tries to get better everyday
should probably listen to less music
seen in hats sometimes
two brothers, too many cousins, and a
nephew

DESIGN VILLAGE

Project 1 Introduction

Stemming from a long tradition of architectural experimentation, every year Cal Poly holds Design Village in Poly Canyon in order to allow students to practice learn by doing through designing, constructing, and occupying their own structures for a weekend. Community colleges from around the state compete along with Cal Poly in groups to design and construct structures that both fit the theme through its function and form. This years theme was Nexus. While each member played a role in each different process, my focus was on documentation and CAD.

Through a mile and a half of distance from Cal Poly's architecture studios, also known as Building 5, you'll find an area that is filled with decades of history and architectural experimentation. Otherwise known as Poly Canyon, our group conducted extensive site analysis that would determine our approach of adaptability and flexibility. This site came with noticeable, changing slope throughout the site.

The structure is a collapsible and compact dwelling that aims to encourage times of rest, bonding, and gathering. We were inspired by fan-like collapsability with characteristics that aided in its form and function. This typology allowed for easy transportation through its compact and light nature. The structure itself resembles a figure eight in its part and two offset semi cones uniting two spaces into one through its circulation.

Permit Submittal Process

As a team we had to receive a permit before beginning construction. This process involved gathering construction documents, mock joints, and an itemized budget for the structure.

CALENDAR

April | 04 2025

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
		1	2	3	4	5
6	7	8	9	10	11	12
13	14	15	16	17	18	19
20	21	22	23	24	25	26
27	28	29	30			

14 PERMIT DAY (make necessary revisions)
 BUILD Work in C&ED Shop
 17 Structural Testing
 22 Final Touchups
 23 Team Poster
 24 Practice Assembly
 DESIGN VILLAGE
 28 TWEEDOWN
 29 Deconstructing/Afterlife Archiving
 Studio Cleanup

Project 2 (SLOt) Introduction

Project 2 or otherwise known as SLOt, in reference to the slot-like nature of an alley and the city of San Luis Obispo, acted as a culmination of everything that we learned throughout the year at Cal Poly. With new tools such as watercolor, digital rendering, and collage, I created depictions of an alley reimagined that also captured the essence of the space. As a project however, I had to redesign an alley that connects Garden St and Broad St in the San Luis Obispo downtown. From site sketches, to study models, all the way to final design, this was really a complete project. vt

Arch133 Reflection

This quarter especially in regards to the Cal Poly pedagogy has been the most demanding when it comes to the complexity and amount of work that must be done. I am however glad that I've gone through it knowing that things may only become more demanding. But with the months I become more adept at handling any design challenge that is to come. Design Village and SLOT were both projects that introduced key architectural understanding and concepts at every step of the way. Whether that be the construction and team coordination of the former or the site analysis of the latter, I still have much to learn.

Arch13X Reflection

The Arch 130 series represents everything that the school needs architecture students to know in their first year; and its a lot. But I never would have expected anything else for such a program and reputation. However while I have many things that I would do extremely differently, even in the last project, I aim to take those lessons with me for the rest of my career. Whether that be the models, drawings, or renders, every part has been truly a combination of influences and ideas that I have been cultivating this past year. v
